

### Low-Fi Prototype

### High-Fi Prototype

I wanted the cart to be simple and display only what was needed: Items in cart, quantity, glaze, prices, a link to checkout, and a link to go back to the menu. The quantity is adjustable in the cart, and removing the entire item is also possible with the 'X' next to the subtotal. The "Payment & Delivery Options" is in big text and in a different color box to encourage the user to complete the purchase.
